Education

San Jose State University, San Jose, CA

August 2019 - December 2021

B.S. Computer Science

- **Relevant Coursework:** Design & Analysis of Algorithms, Operating Systems, Applied Probability & Statistics, Formal Language & Computability, Network Management, Mobile Application Development, Operating Systems, Information Security, Programming Paradigms, Database Management Systems, Game Development, Data Structure Java

Skills

- **Languages:** Python, Java, JavaScript, TypeScript, SQL, ABAP, Lua
- **Technical Skills:** AWS (EC2, S3), Network Management & Security, REST APIs, ERP Systems, SAP, System Integration, Process Automation, Business Process Analysis, Shell Scripting, Virtualization
- **AI & Automation:** Local LLM Deployment, AI Workflow Automation, AI Model Evaluation, Agentic AI, Prompt Engineering
- **Tools:** Git, Docker, Linux, Postman, Google Workspace, Adobe Creative Suite

Work Experience

IT & Process Improvement Manager

Cirebon, Indonesia

Bio Chitosan Indonesia

April 2025 - June 2026

- Evaluated and deployed a centralized Odoo ERP solution, replacing legacy spreadsheet-based processes with automated, cross department data tracking using Python and PostgreSQL.
- Built internal dashboards using Python, Pandas, and Streamlit to automate reporting and track real-time inventory levels, customer orders, and purchasing activity.
- Managed the company's core IT infrastructure including network equipment, cloud services, backups, email systems, and user access management, ensuring stable network uptime for all internal software tools.
- Collaborated with production, accounting, and sales teams to review daily plant operations, fix workflow bottlenecks, and cut down batch approval delays between production and quality assurance teams.
- Redesigned the company website and optimized its technical SEO strategy, securing first-page Google rankings to increase organic traffic and pull in inbound sales leads.

Technical Solutions Engineer

Santa Clara, CA

Glassbeam, Inc

February 2022 - March 2025

- Designed and developed a highly efficient software deployment tool using Pascal, reducing onboarding time by 93% from 30 minutes to just under 2 minutes.
- Built and integrated a secure monitoring system within Glassbeam's proprietary software, enabling remote access, monitoring, and configuration of hospital equipment.
- Built a suite of API integrations to efficiently retrieve, parse, and upload data across diverse client servers, transforming it into structured, readable formats for downstream visualization.
- Managed and optimized multiple AWS instances, implementing monitoring strategies to maximize uptime and ensure seamless operations.
- Collaborated with clients to identify technical challenges, analyze their requirements, and develop tailored solutions to meet their expectations.
- Configured and administered a large network of gateways and monitoring sensors for hospital equipment, feeding real-time data into Glassbeam's software to flag anomalies based on historical trends.

SAP Developer Intern

Surabaya, Indonesia

Sampoerna

January 2020 - June 2020

- Developed advanced automation tools with Visual Basic and ABAP to streamline the upload of extensive sales data into the SAP database, improving efficiency.
- Achieved an 80% reduction in the average time required to upload the supply and chain's weekly volume into the MF50 SAP production planning table, surpassing the upload time goal by 16% and decreasing the time from 2 hours to 5 minutes.
- Resolved production issues by performing root cause analysis and providing timely solutions, ensuring minimal impact on business operations.
- Maintained and supported SAP systems, monitoring system performance and identifying opportunities for improvement.
